

Behind The Wheel

Berk Güler
Mustafa Barış Emektar

The Problem

- **Exploration** of relationships between various features (such as weather conditions, time of day, and location) and their impact on accidents occurred in U.S.
- **Actionable insights** for improving road safety and minimizing the consequences of accidents.

Dataset

US Accidents dataset from Kaggle
(2016 to 2023)

- Time Scope and Size
 - Accidents occurred in the 49 states of the USA.
 - 7.7 million accident records with 3.06GB of data.
- Rich Features
 - 46 different aspects such as the exact location, the weather and road conditions, when it happened.
- Severity Labels
 - Four level of accident severity (such as fatal, highly severe, moderate and minor)

US Accident Analysis

kaggle

Solution

- Exploratory Data Analysis
- Relationship Discovery
- Scaling Up
- Visualization and Interpretation

Results

Top 10 States with most no. of
Accident cases in US (2016-2023)

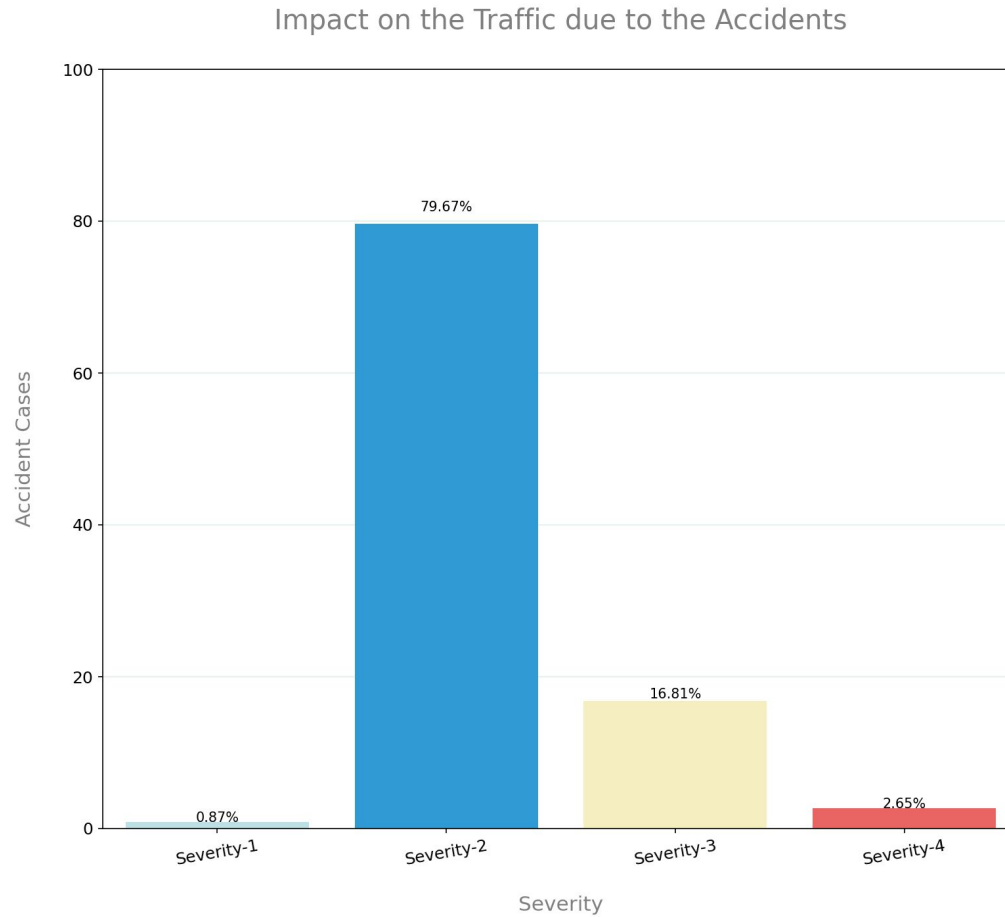

Top 10 Cities in US with most no. of
Road Accident Cases (2016-2023)

Results

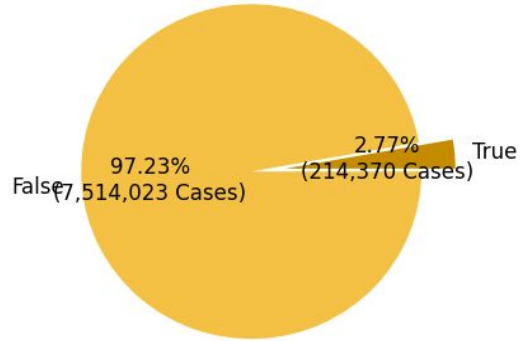

Results

Results

Presence of Stop

Presence of Crossing

Presence of Traffic_Signal

Presence of Junction

Conclusion

- Depend on multiple factors
- Other figures
- Predictions
